Starting prompts for the new account

Copy each grey block as one message. Use A in the **chat project** (the director). Use B in **Claude Code** (the builder). Captions and hand-out (C, D) come at the end of each day.

A. First message in the chat project (start + verify)

```
Read the project files (TRIOZEN-HANDOFF-v2, 32-Day-Showreel-Plan-v2, LESSONS-FULL, project
instructions). Do not start any work yet.

1. In 10 lines or fewer, tell me what you understood: who we are, the daily process, the rules
that matter most, and where we are now.
2. Confirm: Day 19 is Halden (smartphone), assets are done, Round 1 is next. Days 18 and 20 are
done.
3. List anything in the files that is unclear, contradicts itself, or that you would need me to
confirm. Ask at most 5 questions.
4. Do not write any Flow or Veo prompt unless I ask for one for a named asset, and always state
the aspect ratio in it.
Then wait for my answer.
```

B. First message in Claude Code (folder day19/lumen-phone-kit)

```
Read CLAUDE.md and docs/LESSONS.md, then site/DESIGN.md. Mode is Pro (LEAN). Desktop 1440x900
only.
Do not build yet. First verify and report in at most 10 lines:
- the raw/ stills S0-S11 and clips V1-V12 all exist and open; list any missing
- the brand name Halden is not a real company or phone brand (search online)
- the DESIGN.md choices differ from the last 3 sites (6 of 8), using docs/SITES-SUMMARY.md
- the phone design has no iPhone lookalike parts, and there are no people, hands or faces
- npm run check and npm run build run without errors on the current folder
Then wait for my "ok" before Round 1. Never write Flow or Veo prompts. Keep replies short.
```

How to verify every round (use after each round)

```
Round N is built. Check and report briefly:
1. npm run check and npm run build pass.
2. http://localhost:3012/?static=1 shows every section in its final state (list any that do
not).
3. Each section matches its row in the DESIGN.md Motion map (code, not a plain fade); no code
used twice.
4. At least 3 data-hover-demo hovers exist.
5. No console errors; small text at least 12px; headings do not break badly at 1440px.
Tell me in plain words what I should look at with my own eyes, then stop and wait for "ok".
```

C. Captions (after the reel is filmed)

```
Use the project caption skill (not the global one) for Day 19 (Halden). Read site/DESIGN.md and
docs/RECORDING.md first.
Give me: (1) the full caption, (2) the short version of 150 characters or fewer, (3) 5-8
hashtags, (4) the pinned-comment or DM hook.
```

```
Plain words, no hype words, at most 2 emojis, say it is a concept site and not made by the real brand.
```

Important: the kit's caption skill still says "our exact caption format is not written yet". Paste your own caption format once, and ask Claude Code to save it into `.claude/skills/caption/SKILL.md`. Until then it uses a default format.

D. Giving everything out (end of the day)

```
Day 19 is done. Do the finish, one step at a time, and report each result:
1. npm run check, then npm run assets (nothing over 50 MB outside Git LFS).
2. Reel cover: npm run cover with the day number, niche word and accent, then cover-check. Copy it to /Users/hosanna/3D Websites/covers/day-19-cover.jpg.
3. Add the Day 19 row to docs/SITES-LOG.md (Motion, Layouts and Traveling object columns) and the codes-only row to docs/SITES-SUMMARY.md.
4. Add the day's new lessons to docs/LESSONS.md.
5. Run npm run archive -- day-19-halden (the archive-day skill).
6. Commit and push to the day's own repo using only the triozen-tech identity, with no Claude co-author line. Ask me for the repo URL first. Never force-push.
7. Finish with: the file list by folder, total size, and a 5-line summary I can paste into the chat as "Day 19 done".
```

What you hand out, per day

- **Reel video** you film by hand.
- **Cover** `day-NN-cover.jpg` in the covers folder.
- **Caption**: full, short version, hashtags and the comment hook.
- **GitHub repo link** for the day, public, triozen-tech only.
- **"Day N done" note** pasted in the chat so the director keeps the log current.
